DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/19/05 has been entered.

Amended claim 21 directed to an invention that is independent or distinct from the invention originally claimed (the elected invention including claims 1-5, 9, 11, 15-20) for the following reasons: Amended claim 21 and the elected invention are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the patentability of the combination does not rely on the details of the combination. The subcombination has separate utility such as a collimating lens for a beam steering device or has utility by itself.

Since applicant has received an action on the merits for the originally presented invention (the elected invention including claims 1-5, 9, 11, 15-20), this invention has been constructively elected by original presentation for prosecution

Application/Control Number: 10/659,434

Art Unit: 2872

on the merits. Accordingly, claim 21 is withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-2, 15-17, 19 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamura et al.

Nakamura et al discloses a single collimating lens made of plastic; the single lens having a refraction surface (4a) provided on one side and a diffraction surface of unequally spaced gratings provided on an opposite side (Fig. 3, column 3, lines 41-50). Nakamura et al further discloses that a power of the diffraction surface is larger than a power of the refraction surface so as to correct or compensate for or nullify the changes in the focal distance, and thus power, of the collimating lens due to the temperature change (column 5, lines 28-40).

Allowable Subject Matter

Claims 3-5, 9, 11, and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach or suggest a collimating lens having the structure defined in each of claims 3-5, 9, 11, and 18.
